FARM PRODUCTION AND DISPOSITION OF TURKEYS, 1929-38*

This report is one of a series presenting estimates of farm production, disposition, and value of agricultural products. It covers turkeys for the years 1929-38. All estimates, except those for turkeys raised, are issued for the first time in this report.

January 1 Inventory Numbers: Inventory numbers of turkeys on farms January 1 are based primarily upon the census enumeration of turkeys on farms January 1, 1935. The annual changes in the estimates are based mainly upon reported changes in numbers on hand and on the relationship between turkeys raised during the year and the number on hand at the end of the year, as reported annually on January 1 by livestock reporters. This relationship was applied to the series of estimates of turkeys raised, as published in March 1939, to derive a series of estimates of turkeys on farms January 1, 1929-39.

Turkeys Raised: The estimates of numbers of turkeys raised on farms are based primarily upon the census enumeration of turkeys raised in 1929. Annual changes are based upon changes in numbers of turkeys on farms September 1, as reported by crop correspondents, and upon the number raised during the year as reported on January 1 and April 1 following. This series, "Turkeys Raised on Farms, 1929-38" was published in March 1939.

Turkeys Produced: This figure represents the net annual farm production of turkeys, or the number raised during the year, less the death loss of turkeys that were on hand at the beginning of the year. Indications of death losses of mature turkeys are available only for the years 1934, 1937, and 1938, based on reports from crop correspondents and special turkey reporters. It is estimated from information on turkey marketings that about half of the turkeys on farms January 1 are young birds which are sold during the winter; therefore, only about half of the number on farms January 1 are breeding stock to be carried over.

Since the death loss figures available are subject to a considerable probable margin of error, a uniform loss was estimated for all years, varying by geographic divisions. It represents the loss of the breeding stock only, since little, if any, death loss of young birds occurs between the time these are considered to have been "raised," and the time of sale.

Farm Consumption: Consumption of turkeys in the households of farm producers is based on a series of reports received annually from crop correspondents giving the number of turkeys of their own raising that are consumed in their households. This average consumption per turkey farm was multiplied by the estimated number of farms raising turkeys. The number of turkey farms during the period covered by the estimates, 1929-38, was interpolated from the 1930 and 1935 census enumerations of turkey farms.

*Prepared by S. A. Jones, Senior Agricultural Statistician, and E. Smith Kimball, Associate Agricultural Statistician.

Sales: The annual sales are equal to the estimated production, less the consumption in the farm household, adjusted for inventory changes.

Prices: Price per head of turkeys is the average annual calendar year price per pound received by farmers multiplied by the average weight of turkeys sold, as reported by special turkey reporters and crop correspondents. The average annual calendar year price per pound of turkeys is an average of the preceding crop year price and the current crop year price weighted according to the estimated quantity of each crop sold during the year. The average annual crop year price per pound of turkeys is computed from the monthly prices received by farmers October 15 to January 15, inclusive, weighted by the estimated quantities sold during these months. These four monthly prices were used to obtain the annual crop year price because most of the turkeys are marketed during these months, and other monthly prices are mostly nominal. The January 15 price was used to reflect all sales after December 31, although a small percentage of turkeys are sold after January 31.

For the period covered by this report, constant monthly weights were used for each State, which were based upon reported sales by crop reporters (1) "for the Thanksgiving market", "for the Christmas market", and "for later marketing" for the years, 1930, 1931, and 1932, and (2) "in October and earlier", "during November", "during December", and "January and later" for the years 1936, 1937, and 1938. The data for 1936, 1937, and 1938 were available for all States; the data for 1930, 1931, and 1932 for 35 to 38 States. Beginning with 1939, it is planned to use monthly weights based upon current reports.

Farm value per head of turkeys on January 1, 1930-39, is the average price per head January 1, of all turkeys as reported annually by crop correspondents. The 1929 value per head was obtained by multiplying the 1930 value per head by the factor obtained by dividing the 1929 price per head of turkeys sold by the 1930 price per head.
